Pillar 8 — Business Intelligence

Product: EduOS · **Layer:** 8 · **Sidebar:** Business Intelligence

Purpose

Business Intelligence tells the academy owner **what to do next** — not just what happened. It combines KPIs, trends, predictions, and priority decision cards so you act on attendance drops, full batches, and at-risk students before they become crises.

Reports (System → Reports) show historical tables; **BI** shows actionable priorities.

Who uses it

Role	Access
Center admin	Full BI dashboard
Platform owner	Via support view into a center
Teachers / parents	No BI access

Modules & functionalities

Path: Business Intelligence

Tab	Function
Decisions	Today's priority cards — high/medium/info with Resolve links to relevant module
KPIs	Headline metrics + recommended actions table
Trends	4-week attendance chart, weekly sessions completed chart
Predictions	30-day forecast cards + dropout risk register
Lead Analytics	Leads by source, conversion funnel
Batch Analytics	Per-batch enrollment, utilization, curriculum %

Sample decision types:

- Attendance dropped this week → go to Attendance
- Batch over capacity → open parallel batch
- Batches without tutor → assign teachers
- Classes tomorrow → review schedule
- Leads in pipeline → follow up CRM
- AI insight alerts → review AI Assistants

KPI metrics: Overall attendance, avg test score, lead conversion, curriculum progress, capacity used, at-risk students, active leads, messages sent.

How to use — step by step

A. START EACH DAY WITH DECISIONS

1. Open **Business Intelligence** → **Decisions**.
2. Read cards sorted by priority (high first).
3. Click **Resolve** on each — jumps to Attendance, Batches, Teachers, Schedule, CRM, or AI.
4. Take action in that module, then return to BI.

B. REVIEW KPI HEALTH

1. **KPIs tab** — scan stat cards.
2. Read **Metrics** → **Decisions** table for status badges (OK / Monitor / Action).
3. If attendance < 80%, plan parent outreach via Communication Hub.
4. If capacity ≥ 90%, create a new batch in Academy.

C. MONITOR TRENDS

1. **Trends tab** — compare 4-week attendance line chart.
2. Review weekly sessions marked completed — curriculum pace indicator.

D. ACT ON PREDICTIONS

1. **Predictions tab** — read 30-day forecast cards (confidence %).
2. **Dropout Risk Register** — students flagged high/medium risk.
3. Click **Intervene** → opens Student Success for intervention plans.

E. ANALYZE LEADS AND BATCHES

1. **Lead Analytics** — which sources convert best; funnel drop-off stages.
 2. **Batch Analytics** — utilization badges (green/orange/red); curriculum progress per batch.
 3. Use insights to adjust marketing (CRM) and staffing (Teachers).
-

Decisions vs Reports

Business Intelligence	Reports (System)
What should I do today?	How did we perform?
Priority cards with actions	Student & teacher performance tables
Predictions and risk register	Export-style summaries
Live KPI thresholds	Historical test/attendance averages

Verify

- [] Decisions tab shows at least one card when center has data
- [] Resolve buttons navigate to correct sidebar module
- [] KPIs reflect current enrollment and attendance
- [] Dropout risk register lists students with risk badges
- [] Lead Analytics matches CRM lead count

Demo tip

Center admin demo data includes leads, batches, and attendance — open **Decisions** and **Predictions** for populated examples.
