TUTORSALA OPERATIONS GUIDE

Center Admin Onboarding Guide

Step-by-step setup for new tuition center administrators — register, teaching profile, batches, and class scheduling.

Center Admin Onboarding Guide

Product: Tutorsala (tutor-hub)

Audience: New tuition center owners and managers

Goal: Set up a center from scratch — register, configure settings, link yourself as a teacher (if you teach), create batches, and run class scheduling.

Before you start

Item	What you need
Login URL	Open the app (local: run `start.bat`, then open the URL shown in the terminal)
Role	Use the **Center admin** portal tile on the login screen
Password rules	At least 8 characters (enforced at registration)
Demo reference	Ask the Tutorsala team for demo login details

Recommended order: Register → Settings → Teaching profile (if you teach) → Availability slots → Teachers (staff) → Batches → Students → Class Schedule → Fees.

Step 1 — Register your tuition center

ACTIONS

1. On the login home screen, click **Register your tuition center** (or open the register page directly).
2. Fill in:

- **Center name** — displayed across the workspace
- **Your name** — center owner / admin
- **Email** — becomes your login (must be unique)
- **Phone** and **City** — optional but recommended
- **Password** — your admin password

1. Click **Create center**.

WHAT THE SYSTEM DOES

- Creates a new **center** (tenant) with status `active` and plan `trial`
- Creates a **center admin** user linked to that center
- Initializes empty center settings
- Logs you in automatically to the **Command Dashboard**

VERIFY

- [ ] You land on the **Dashboard** (not the login screen)
- [ ] Top bar shows your name and center name
- [ ] Sidebar shows Academy, CRM, Tutor Success, Settings, etc.
- [ ] **Academy** → **Batches** shows “No batches yet” (empty workspace)

ALTERNATIVE: PLATFORM OWNER VIEW

If Tutorsala platform staff onboard you, they log in as **Platform owner** → **All centers** → open your center → **Support view**. That mirrors your admin workspace for troubleshooting. Day-to-day work should still use your own **Center admin** login.

Step 2 — Orient the admin workspace

Key sidebar sections for daily operations:

Section	Use for
Overview → Dashboard	Today's stats, upcoming classes, quick links
Education CRM	Leads, public website
Academy	Batches, Class Schedule, Teachers, Students, Fees, Attendance, Tests
Tutor Success	Teacher availability, homework, tutor tools
System → Settings	Center name, billing, WhatsApp, AI keys, teaching profile

VERIFY

- [ ] You can open each Academy item without errors
- [ ] **Dashboard → Upcoming Classes** is empty until batches exist

Step 3 — Configure center settings

Path: System → Settings

3A — CENTER DETAILS

1. Set **Tutoring center name** (how parents see your brand in messages).
2. Set **Default country code** for phone numbers (e.g. `+91`).
3. Click **Save Settings** (under AI section, or after editing billing — save applies to all settings panels).

3B — BILLING & INVOICES (RECOMMENDED EARLY)

1. **Invoice prefix** — e.g. `INV`
2. **Default due day** — day of month fees are due (1–28)
3. **UPI ID** — shown in fee reminders
4. **Bank details** — optional, for invoice footers

Batch-level fees are set when creating batches; per-student overrides are on the student form.

3C — WHATSAPP & AI (OPTIONAL)

- **WhatsApp Business API** — without credentials, messages are simulated locally
- **OpenAI API key** — optional; AI works with rule-based fallback without a key

3D — DATA STORAGE

Under **Data Management**, confirm storage backend:

- **Neon PostgreSQL** — data synced to server database
- **Browser localStorage** — demo/local mode; run `start.bat` with `DATABASE_URL` for production sync

VERIFY

- [ ] Center name saved and reflected in top bar / parent-facing copy
- [ ] Invoice prefix and UPI ID saved
- [ ] Storage backend matches your deployment expectation

Step 4 — Link yourself as a teacher (owner who also teaches)

Many center owners teach their own batches. Use **one admin login** — do not create a separate teacher account for yourself unless you want a second login.

Path: System → Settings → My teaching profile

ACTIONS

1. Check **I also teach classes**.
2. Choose **Teacher profile**:

- **Use my account (your name)** — creates/links a teacher roster entry to your admin user

- Or pick an existing teacher record if you already added yourself under Teachers

1. Enter **Subjects** (comma-separated), e.g. `Mathematics, Science`.
2. Click **Save teaching profile**.

VERIFY

- [ ] Checkbox stays checked after refresh
- [ ] **Academy** → **Teachers** shows your name with a green **You** badge
- [ ] **Tutor Success** defaults to your linked teacher profile
- [ ] You can assign yourself when creating a batch

STAFF TEACHERS (DIFFERENT FROM OWNER)

For tutors who need their **own login**:

1. **Academy** → **Teachers** → **+ Add Teacher** — add name, email, phone, subjects (roster record).
2. Teacher login accounts are separate users with role `teacher` and a `linkedTeacherId`. In the current MVP, demo accounts are pre-seeded; for new staff, coordinate with platform support or data import until a self-service “invite teacher” flow exists.

Step 5 — Set teacher availability slots

Batches pick **free slots** from a teacher's availability. Slots already assigned to another batch are hidden to prevent double-booking.

Path: Tutor Success → Schedule tab → Manage slots

(As admin-with-teaching-profile, Tutor Success opens on **your** teacher. For staff, use Support view or have the teacher set their own slots from the Teacher portal.)

ACTIONS

1. Click **Manage slots**.
2. Add one or more slots — each slot has:

- **Days** (e.g. Mon, Wed, Fri)
- **Start time** and **End time**

1. Example: Slot 1 = Mon/Wed/Fri 4:00–6:00 PM; Slot 2 = Sat 10:00–12:00 PM.
2. Click **Save availability**.

VERIFY

- [ ] Slots appear in the Availability panel
- [ ] **Academy** → **Batches** → **New Batch** shows your slots when you select yourself as teacher
- [ ] After assigning a slot to Batch A, that slot does **not** appear when creating Batch B for the same teacher

---

Step 6 — Add teachers (staff roster)

Skip if you are the only teacher and already linked in Step 4.

Path: Academy → Teachers → + Add Teacher

ACTIONS

1. Enter name, email, phone, subjects.
2. Save.
3. Have each teacher set availability under **Tutor Success** (teacher login) or set slots while in admin Support view.

VERIFY

- [ ] Teacher appears on Teachers list with batch/student counts (zero initially)
- [ ] Teacher can be selected in batch form **Assigned teacher** dropdown
- [ ] Teacher with no slots shows manual day/time fallback in batch form (or prompt to add slots in Tutor Success)

Step 7 — Create a batch and auto-generate schedule

Path: Academy → Batches → + New Batch

ACTIONS

1. **Batch name** — e.g. `Grade 10 Mathematics – Evening`
2. **Assigned teacher** — select tutor (yourself or staff)
3. **Capacity**, **Monthly fee (₹)**, **Fee due day**, **Subjects**, **Notes**
4. Under **Class schedule from teacher availability**:

- Select a **free availability slot** (preferred), **or**

- If no slots exist, pick days + start/end time manually

1. Set **Course start date** and **Meeting platform** (Google Meet / Zoom / Teams)
2. **Course topics** — one topic per line (one class per topic):

```
Introduction to Algebra
Linear Equations
Quadratic Equations
```

1. Click ⚡ **Auto-Generate Schedule** — preview lists all sessions with dates and meeting links
2. Click **Save Batch**

RULES ENFORCED BY THE APP

- If the teacher has availability slots, you must pick a slot (or get a validation error)
- A slot already used by another batch cannot be selected again
- Saving syncs the batch to the chosen `availabilitySlotId`

VERIFY

- [ ] Batch appears in the list with schedule summary (e.g. Mon/Wed/Fri · 4:00 PM)
- [ ] **Schedule** button on the batch shows all generated sessions
- [ ] **Dashboard** → **Upcoming Classes** lists the next session
- [ ] **Academy** → **Class Schedule** shows sessions on the week calendar
- [ ] Creating a second batch for the same teacher does not offer an already-booked slot

---

Step 8 — Add students

Path: Academy → Students → + Add Student

ACTIONS

1. Enter student name, grade, contact email/phone
2. Assign **Batch**
3. Enter **Parent name** and **Parent phone** (used for comms and fee reminders)
4. Optional: override monthly fee on the student record
5. Save

OPTIONAL: CRM ENROLLMENT

Education CRM → Lead pipeline — convert a lead to a student when they enroll (links CRM to Academy).

VERIFY

- [ ] Student appears in Students table with correct batch
- [ ] Batch capacity / student counts update on Dashboard stats
- [ ] **Reports → Student Reports** includes the new student

Step 9 — Manage class schedule (day-to-day)

Path: Academy → Class Schedule

WEEK CALENDAR

- Browse by week; filter by batch
- Click a class for actions

PER-SESSION ACTIONS

Action	When to use
Join Meeting	Open live class link
Copy Link	Share with parents
Reschedule	Move one session to another date/time
Cancel	Cancel with optional reason; parents can be notified (WhatsApp if configured)
Mark done	Mark session completed
Restore / Undo	Reverse cancel or completion

BATCH-LEVEL SCHEDULE EDIT

Academy → **Batches** → **Schedule** on a batch — edit meeting links or mark sessions done in bulk preview.

VERIFY

- [ ] Rescheduled session shows "Was [old date/time]" note
- [ ] Cancelled sessions move to cancelled filter/tab
- [ ] Completed sessions reflect in attendance and curriculum progress
- [ ] Teacher portal (**Teacher** → **My schedule**) shows the same sessions for linked teachers

---

Step 10 — Fees & invoices

Path: Academy → Fees & Invoices

SETUP (ALREADY DONE IN SETTINGS)

- Invoice prefix, default due day, UPI ID

PER BATCH / STUDENT

- **Monthly fee** and **Fee due day** on batch form
- Per-student override on student form

OPERATIONS

- Generate or review invoices for the billing period
- Send reminders (simulated WhatsApp unless API configured)
- Mark payments received

VERIFY

- [ ] Invoice amounts match batch fee × enrolled students (minus overrides)
- [ ] UPI ID appears on reminders
- [ ] **Parent Portal** → **Fees** tab shows balance for linked parents (family demo: `sharma@family.demo`)

Step 11 — Next steps (after core setup)

Area	Path	Purpose
Attendance	Academy → Attendance	Mark who attended each class
Tests & Marks	Academy → Tests & Marks	Record assessments; feeds reports
Communication Hub	Communication	Messages to parents/staff
Student Success	Student Success	Homework, assignments
Tutor Success	Tutor Success	Homework grading, lesson plans
Reports	System → Reports	Student and teacher performance
Public Website	Education CRM → Public Website	Center listing for inquiries

Master verification checklist

Use this before going live with real students.

ACCOUNT & CENTER

- [ ] Center registered; admin can log in via **Center admin** tile
- [ ] Password reset works (**Forgot password** on login)
- [ ] Settings saved: center name, billing, storage backend understood

PEOPLE

- [ ] Owner teaching profile linked (if applicable) — **You** badge on Teachers
- [ ] Staff teachers added to roster
- [ ] Availability slots saved for every teacher who runs batches

ACADEMIC OPERATIONS

- [ ] At least one batch created with topics and generated schedule
- [ ] No double-booked teacher slots across batches
- [ ] Students assigned to batches
- [ ] Class Schedule calendar shows upcoming sessions
- [ ] Meeting links open (Google Meet / Zoom / Teams)

BUSINESS OPERATIONS

- [ ] Monthly fees set on batches
- [ ] Invoices / fee reminders tested
- [ ] Parent contact numbers on student records

OPTIONAL INTEGRATIONS

- [ ] WhatsApp API configured (or accept simulated mode)
- [ ] OpenAI key added (or accept offline AI)

Common issues

Symptom	Likely cause	Fix
No availability slots in batch form	Teacher has no slots	Tutor Success → Schedule → Manage slots
All slots show as booked	Every slot assigned to another batch	Free a slot (delete/edit batch) or add a new availability slot
“Select a teacher availability slot” error	Teacher selected but no slot/day chosen	Pick a slot or use manual days/times
“That slot is already used by …”	Another batch holds the slot	Choose a different slot or reschedule the other batch
Teacher cannot see batches	Teacher login not linked to roster	Ensure teacher user has `linkedTeacherId` matching roster id
Data lost after browser clear	localStorage mode	Use Neon PostgreSQL via `start.bat` + `DATABASE_URL`
Owner wants two logins	Unnecessary for solo owner	Use **I also teach classes** in Settings instead

Quick reference — navigation map

```
Register → Dashboard
    │
    ├─ Settings ──────────── Center name, billing, teaching profile
    │
    ├─ Tutor Success ──────── Availability slots (Manage slots)
    │
    ├─ Teachers ──────────── Staff roster (+ You badge for owner)
    │
    ├─ Batches ──────────── Create batch → pick slot → topics → Auto-Generate
    │
    ├─ Students ──────────── Enroll into batches
    │
    ├─ Class Schedule ─────── Calendar: cancel / reschedule / mark done
    │
    └─ Fees & Invoices ─────── Billing after enrollment
```

Demo walkthrough (5-minute smoke test)

1. Log in with a demo **Center admin** account
2. **Settings** — confirm teaching profile or enable **I also teach classes**
3. **Tutor Success** → **Schedule** — review **Manage slots**
4. **Batches** — open an existing batch or create a test batch; confirm slot picker
5. **Class Schedule** — reschedule one session; confirm calendar updates
6. Log in with a demo **Teacher** account — confirm **My schedule** matches her batches only
